

# Tomas Borquez

FullStack Developer

## Profile

Experienced Software Developer adept in bringing forth expertise in design, installation, testing and maintenance of software systems.

## Employment History

### Software Engineer at Affable

October 2022 - Present

- Took full ownership of features from concept to deployment, ensuring a seamless integration of front-end, back-end components and testing to to maintain high quality software.
- Regularly maintained and upgraded legacy code, ensuring the application stays up-to-date.
- Encouraged the adoption of coding best practices on new features, significantly improving the development team's productivity, code quality and project architecture.
- Quickly fixed bugs and solved clients problems, leading to happier customers.

## Projects

### Custom HTTP Framework - NodeJS

- I worked in a HTTP framework in NodeJS that is inspired on Express and Hono. It has most of the features express has and more, also adds simple middlewares like CORS. It is fully tested and I have used it for making simple HTTP servers.

### Discord Speaking bot

- I created a discord bot you can interact with and talk in **voice chat** and normal chat, it is able to speak multiple languages mainly Spanish and English and I even made a medium blog post on how to implement a simplified version of one by yourself: <https://medium.com/gitconnected/make-an-ai-talking-discord-bot-chatgpt-and-javascript-f37abde58cd0>
