## SUMMARY

---

A **Software Engineer**, with around **1 year** of hands-on expertise thriving in the dynamic world of startups. I have collaborated within teams, ensuring data is spot-on and the project runs smoothly. I focus on crafting user-friendly interfaces using **React, Ant Design, and Redux Toolkit**. Additionally, I bring proficiency in **Python** and **Django**, including the **Django Rest Framework**. Excited to bring my enthusiasm and growing skills to a team that values connections, mentorship, and the well-being of their people.

## EDUCATION

---

### Bachelor of Engineering (B.E.) – Computer Science

Aug 2018 – Jul 2022

*Visvesvaraya Technological University (VTU)*

*Bangalore, IN*

GPA: **8.0**

### Intermediate – Mathematics & Computer Science

Apr 2016 – May 2017

*City Montessori School*

*Lucknow, IN*

Percentage: **86%** in ICSE Board

## SKILLS

---

**Technical:** HTML, CSS, JavaScript, TypeScript, Python, Java, Git/GitHub

**Frameworks/Libraries:** ReactJS, Ant Design, Django, Bootstrap, Redux/Redux Toolkit

**Mobile App Development:** Android Studio

**Tools/Platform:** Postman API Testing

## WORK EXPERIENCE

---

### Software Engineer – Product Team

Dec 2022 – Oct 2023

*iVoyant Systems*

*Bangalore, IN*

#### Case Manager Product:

A product like JIRA for project management, but it aims to target a wide range of domains, for all general use cases like Medical, Call Centre, Hotel management, etc. Different teams can be created under every project and cases can be registered within those teams that can be further assigned to and worked on by caseworkers.

- Building from scratch, led **requirement-gathering** efforts with PM, BA, and UX to ensure alignment with project goals.
- Led the **feature development** involving intricate flows and modular components across multiple screens while leveraging industry-standard technologies, like **ReactJS, Ant Design (AntD), and Redux Toolkit**. Collaborated with UX and BE to maintain **data consistency** and routing.
- Streamlined project management using **Trello**, resulting in improved team coordination and project efficiency.

- Designed and implemented Figma designs into responsive components in the **Dashboard**. Used **CSS Flexbox** for uniform design.
- **Tested** and **implemented API** calls using RTK Query for seamless **backend integration**, utilizing **Git/GitHub** for effective team collaboration and version control.
- Successfully **deployed** the initial version of the Case Manager application.
- Simultaneously addressed **bug-fixing** tasks to uphold product quality.

#### Additional Responsibilities:

- **Product Enhancement:** Developed version 2 dashboard and reusable ReactJS components for improved functionality for another product.
- **Full-Stack Project:** Independently created a React/Vite app with CRUD and import/export capabilities, utilizing NestJs, TypeScript, and MongoDB.
- **Usability Improvement:** Evaluated and resolved critical bugs, enhancing usability and UX.
- Addressed bug-fixing tasks to maintain product quality for another project.
- **Proactive Learning:** Planned for **upskilling** in TypeScript, Redux, and backend technologies.

#### Web Development Intern – Development Team

*Leanpitch Technologies*

**Sep 2021 – Jan 2022**

*Bangalore, IN*

- Developed a ReactJs-based clone of [productthinking.io](https://productthinking.io), showcasing proficiency in modern web development technologies.
- Implemented an Adobe design for the **Pricing Page** and **Course Page** using ReactJs, demonstrating strong UI/UX skills.
- Collaborated effectively within a team, acquiring proficiency in essential Git commands and GitHub for version control.
- Expanded knowledge base by exploring Python and APIs, culminating in a Django Framework project, highlighting adaptability and versatility.

## PROJECTS

---

#### Cyberbullying Detection – Machine Learning in Python

- Supervised ML model for modern **cyberbullying detection** using NLP, text classification, feature extraction, and sentiment analysis. Utilized the Kaggle dataset.

#### Personal Projects

- Bewakoof clone: replicates the UI/UX of Bewakoof.com and is developed using **React**, **TypeScript** and **Bootstrap**. It showcases the use of **semantic HTML** tags, along with **pure CSS and flexbox** skills to deliver a visually appealing and responsive user interface. Initiated using **Vite's** React TypeScript template, providing a modern development environment. Code is available on **GitHub** and app is deployed through **Vercel**. Links: [Code](#) and [App](#)
- Spaceship Battle Project: A simple 2-player spaceship battle app developed using **Python** and the **Pygame** library for fun. Code is available on [GitHub](#)
- Completed the **Android Basics** course by Google on Udacity, and developed **android mobile apps** using **Android Studio**, **Java**, and **XML**. Notable projects include a Coffee Ordering App and Language Learner App.
