

GAUTAM TINKER

Software Engineer

OBJECTIVE

Excelling in a challenging Full Stack Developer role within the Mernstack, utilizing advanced skills in MongoDB, Node.js, and Express to drive the success of a leading MNC in the IT industry. Preferably in Delhi-NCR.

PROFILE SUMMARY

- Offering **9 months** of experience in Software Development, specializing in Full Stack Development within the LMS and LOS software for the non-banking financial sector.
- Proficient in MySQL, MongoDB, Redis, and Elasticsearch, with proven skills in enhancing platform functionality and user experience.
- Expert in utilizing Docker for efficient project deployment, employing Git commands for streamlined version control, leveraging skills in MongoDB, Node.js, and Express to enhance platform functionality and user experience.
- Led and supported development initiatives, enhancing platform functionality and elevating user experience within a dynamic environment, showcasing strong technical skills and initiative.

FREELANCE EXPERIENCE

Sep'23 – Present: Freelance Full Stack Developer, Kugelblitz.xyz, Jaipur

Responsibilities:

- Implementing a new system resulting in increase in efficiency by executing web scraping using Puppeteer for automation, providing valuable insights and enhancing productivity.
- Leading the development of LMS and LOS software for the non-banking financial sector, leveraging MySQL for sanction letter generation and API validation in Node.js and React, showcasing strong leadership and technical skills.

WORK EXPERIENCE

Jan'23 – Sep'23: Junior Software Developer, sarv.com, Jaipur

Responsibilities:

- Worked on the implementation of Asterisk for streamlined communication, showcasing strong initiative & technical expertise within dynamic environment.
- Led and managed development initiatives, improving platform functionality and enhancing user experience, in a dynamic and impactful setting.
- Successfully managed and maintained MongoDB, MySQL, and Redis databases, optimizing queries and enhancing data storage.
- Leveraged Docker for efficient project deployment and utilized Git commands for streamlined version control and collaborative workflow.

PROJECT UNDERTAKEN

E-Commerce Website:

- Developed a front-end application incorporating an e-commerce website and cryptocurrency tracker.
- Utilized the Coinbase API to display real-time and dynamically updating stock prices without the need for page reloading.
- Implemented a carousel feature to showcase listed prices along with their respective logos.
- Enabled users to access information about specific stocks by clicking on them.
- Created a visually appealing pie chart to represent the distribution of cryptocurrencies.

Frontend App: Real-Time Stock Prices and Cryptocurrency Tracker:

- Designed and developed a frontend application offering real-time stock prices and cryptocurrency tracking functionalities.
- Leveraged the Coinbase API to continuously update the current prices of stocks without requiring page refresh.
- Implemented an interactive carousel feature to display listed prices alongside corresponding logos.
- Enabled users to access comprehensive information about individual stocks by simply clicking on them.
- Utilized a visually informative pie chart for effectively depicting the distribution of cryptocurrencies.
