Argentina

Summary

I can read and understand technical documentation in order to successfully apply it.

IT Senior with leadership capabilities, working with high performance teams, oriented to meet both client and company's objectives. Balancing technical side and business requirements.

I am driven by challenges where I can bring real value that makes a difference for the company and my team.

19 years of experience working on IT Projects.

Education

Universidad de Moron

Degree in information systems, Information Technology · (2002 - 2010)

I have completed the 94% coursework for a degree in Information Technology and I am in the process of finalizing my thesis for graduation.

E.C.E.A.

Electronics Technician with Telecommunications. · (1995 - 2001)

About my last project:

As a Senior Java Developer, I spearheaded an innovative project integrating **Artificial Intelligence** with Salesforce. I developed robust **Java micro services** using **Spring Boot** to streamline communication between Salesforce and Python-based **AI** via AWS Kinesis. Employing batch processing techniques, I optimized data handling efficiency and facilitated AI-generated routing solutions' seamless transfer using **AWS Kinesis and S3**. Additionally, I transformed AI output into complex Salesforce objects, showcasing expertise in API integration and APEX development. Technologies utilized included **Java, Spring Boot, AWS, MongoDB, Neo4j**, and **Salesforce APEX API**, demonstrating proficiency in addressing complex integration challenges and enhancing middleware efficiency.
