A passionate software enthusiast with hands-on experience in Frontend development. Seeking to excel as a Software Developer, leveraging skills in Java, React.js, and cutting-edge tech. An IIT-JEE Advanced qualifier eager to contribute to impactful projects, embrace continuous learning, and make significant contributions within a dynamic team.

PROFESSIONAL EXPERIENCE

Philips India Limited

2023 Jan - 2023 Jun | Bangalore, India

Software Intern/Apprentice

Project Title - Phillips Guide Health Service

- Contributed to the development of a healthcare app, enhancing user experience and visual appeal through the creation of various UI/UX components, adhering to design guidelines and best practices.
- Utilized the flexbox feature of CSS to develop a responsive component to display large data to the user.
- Utilized the react-pdf and jspdf libraries to implement a dynamic PDF generation and download feature, adding significant value to the app's functionality.
- Resolved numerous bugs, ensuring app stability and smooth functionality.
- Assisted the testing team during a release, facilitating manual testing of the app.
- Ran test cases for one of the most complex and important features of the app.
- Tech Stack: React.js, TypeScript, Git, Azure.

PROJECTS

Kanban Board App

https://pratyush1506.github.io/kanban/

- Created a Kanban board application using React.js, offering essential task management features.
- Users can add, edit, and delete boards and cards for effective organization.
- Implemented drag-and-drop functionality for seamless card movement between boards.
- Achieved data persistence using local storage, ensuring user data remains intact across sessions.

Photo Sharing Platform

- A photo sharing platform that is built using React JS for the frontend, Tailwind for styling, and Sanity for the backend,
- The platform will allow users to upload, view, and share photos with others. The backend built on Sanity will handle the storage and management of the photos and user data.

Smart bin

- On placing hand in front of the bin the lid opens automatically, so user can throw garbage without touching the bin.
- When the bin is full, with the help of an LED, the bin indicates whether it is full or not, allowing the user to empty the bin in time.
- Sensors and components used include UltraSonic, LED, Servo motor, and Arduino Uno.

EDUCATION

B.Engg.

2019 – 2023 | Bangalore, India

BMS College of Engineering

CGPA - 7.6

CBSE 12th 2006 – 2018 | Bhopal, India

Jawahar Lal Nehru School Percentage - 84.2%

SKILLS

Java React.js

OS Frontend Development

C++ Git

DSA

OOPS

ORAGANIZATIONS

NSS Bangalore, India

- Attended NSS Special Camp.
- Coordinated and volunteered for numerous NSS events.

Free Coaching Vidya

Bangalore, India

Graphic Designer

- Design flyers, invitations, certificates, and other graphic content for the NGO.
