ORGANIZATIONS

Freo, Senior Software Engineer 05/2021 - present

Freo Save - NeoBank Product

- Developed, managed, and scaled the backend for a neo-bank service from scratch using Spring Framework, Spring Cloud, and Spring AOP, in two member backend team.
- Led API integration with bank partners Equitas and
- Improved onboarding flow with data engineering techniques resulting in an 18% decrease in drop-off
- Collaborated with product managers and designers to discuss and implement feature improvements.
- Scaled the product to 100k+ users, which also helped in cross-selling other freo products

MoneyTap - Lending Product

- Managing Know-Your-Customer (KYC) requirements, utilizing OCR-based document verification techniques, Central KYC (CKYC) compliance, and advanced address analysis for robust fraud prevention.
- Lender onboarding onboarded Incred as a lending partner, disbursed 82+ cr.
- Interviewed 20+ candidates and mentored 2 new joiners.

Freo Vault - Sensitive Data Vault

- Solely developed a standalone service, Freo Vault, which serves as a repository for **storing sensitive** customer data.
- Vault is built to be used across products currently being used in Freo Save.
- · Sensitive data includes account details, card details, etc stored in an encrypted format.
- Used Amazon KMS as part of encryption chaining.

AWS Infrastructure Optimization

- Implemented shutdown of non-production Elastic Container Service (ECS) cluster during nonoperational hours, improving resource allocation. Devised an ECS capacity-provider strategy to launch tasks in FARGATE-SPOT, optimizing compute resources.
- · Leveraged AWS Lambda in conjunction with a serverless architecture for efficient management.
- This resulted in reducing infrastructure costs by 12%

SKILLS

Technical skills:

- Programming Languages: Java, Kotlin, Python, SQL
- Frameworks: Spring & Spring Boot, Flask
- Databases: Postgres, MongoDB, Bigtable
- Tools & Technologies: AWS, Terraform, Grafana, Git, CI/CD, Docker, Redis, SonarQube

EDUCATION

The National Institute of Engineering, Bachelor of Technology 2016 - 2020 | 8.6 CGPA

PROJECTS

Cheat code, LLM chatbot

06/2023 - present

- Developed an intelligent chatbot for user inquiries, providing cheat codes for various games at different levels.
- Leveraged OpenAl APIs for natural language processing.
- Utilized function calling and embedding techniques for seamless interactions.
- Employed MongoDB for efficient data management.

Book Tracker 🖸

- Developed a scalable and highly available application that allows you to keep track of the books you read.
- It can store every single book possible in the world and be exposed as a catalog.

Tech stack:

Application Tier: Spring Boot, **Database:** Apache Cassandra, Security: Spring Security, View Layer: Thymeleaf

ACTIVITIES

Masai Hack Overflow Open Coding Challenge

Ranked in the Top-10 amongst 3000+ participants in the Masai Hack Overflow

Replit Extension Hackathon

Awarded Second Place in the Replit Extension Hackathon. 🗷
