---

Experience

Senior Frontend Engineer

Sulonya Technologies Private Limited • Shivamogga, KA
07/2020 - Present

- Sulonya Official Website
  - Developed an Angular based web application to manage the portfolio of Sulonya.
  - Managed to have lighthouse score >90% among all the factors.
  - Loads the website in less than a second and implemented Angular Universal for SSR.
  - Developed with a team size of 3.
- TUB – The URL Book
  - An application to organize the bookmarks, create a folder structure and share the files/folders with associated team members
  - This project consists of both web app and browser extension
  - For web app we used Angular 13 and Material UI where I contributed by developing folder structure and authentication module and few CRUD operations.
  - For browser extension we used manifest V2. I was part of developing authentication module and few CRUD operations.
- Blockchain Engine
  - An Engine to transform any transactions of application into blocks.
  - I was part of designing the frontend UI for the application
- Agecare and pflege connections
  - Worker management tool to manage the caregivers, elders and generation of invoices
  - Updated UI, removed legacy packages, introduced new features such as contract editor, document viewer, permission based features or actions enabler and much more.
- Upgraded Angular versions
  - Refactored legacy Angular codebase, seamlessly migrating from version 6 to 16; increased app stability by 25% and reduced bug reports by 15%.
  - I have experience in upgrading Angular versions from 6 to Angular 17.

Software Engineer

Srichid Technologies Private Limited • Bengaluru, KA
07/2019 - 06/2020

- Haspit
  - A web tool to manage, edit, and share files digitally using blockchain technology.
  - Developed using Angular 6 and later upgraded to Angular 8
  - I was part of a frontend team to develop the screens (almost 50%).
  - Optimized landing page load time by 65%.
